Evosys strengthens IT infrastructure for further company growth

Successful relocation of central IT infrastructure to certified data centre in Nuremberg.

Erlangen, October 2026: The new data centre location provides the necessary capacity to reliably support digitalisation and planned company growth.

The options to continue and expand IT operations at the company location were no longer sufficient for the increasing requirements.

In the data centre, central servers, company applications and IT services are operated under conditions specifically tailored to the requirements. These include reliable power supply, air conditioning, regulated access and high-performance network connectivity. The location meets recognised quality and security standards.

The existing IT was also reviewed and further developed as part of the move. The migration was carried out in steps from the end of 2025 and could be integrated into the ongoing business operations. Cloud services and the data centre infrastructure continue to complement each other. This creates a flexible foundation for existing applications and new digital solutions.

"Such a relocation is a demanding task, as IT must remain reliably available for business operations throughout. We had to plan each step carefully and align the transition well with the company's processes. That the migration has been successfully completed and our day-to-day business could continue is a strong achievement of the entire team," says managing director Frank Brunnecker of Evosys Laser GmbH.

The data centre relocation is also a further step in Evosys's long-term information security strategy. Currently, information security management at the company location is being systematically prepared for ISO/IEC 27001 certification. The goal is to permanently anchor information security in processes, organisation and technical infrastructure.

About EVOSYS:

The Evosys Laser GmbH develops and manufactures customised systems for laser welding of plastics at its location in Erlangen. With the long-standing market and process experience of its employees, the company offers creative and innovative solutions worldwide for integration into automation solutions. A service package from design consulting to prototype production at its own technology centre rounds off the product portfolio.

The company was awarded the Bavarian Innovation Prize in 2022 for its patented AQW laser welding process. In 2025 it received the award BAYERNS BEST 50 for the 2nd time. In the same year, the company was also awarded the sought-after business award "Großer Preis des Mittelstandes". Furthermore, it continues to be among the TOP 100 SMEs and was also awarded the Bavarian SME Award and the Golden Bavaria in 2026. There are close contacts to the university location Erlangen-Nuremberg and to the Bavarian Laser Centre.

The Evosys Group currently consists of five companies, the parent company Evosys Laser GmbH, the two subsidiaries Evosys Laser Services GmbH and Attosys Laser GmbH as well as the branches Evosys (Suzhou) Laser System Co., Ltd. in China and Evosys North America Corp. in the USA.
